

AUGUST 2022 NEWSLETTER

Welcome to the August issue of the Advance Anti-Slip Surfaces newsletter

How to help prevent slips on stairs, stairwells, landings, platforms, ramps, walkways, and ladders?

Each year thousands of people are reported to suffer easily preventable injuries from a slip, trip, stumble, tumble, falter or fall, that can cause simple medically treated cuts, bruises, fractures, dislocations or in the worst case, a fatality.

Almost one quarter of all serious insurance claims in Australia were from slips, trips, stumbles, tumbles, falters or falls at the same level, and over a period of 12 years, 386 workers died.

Many incidents could have been prevented!

Nearly 60% of these preventable incidents were caused by environmental factors such as slippery surfaces after a fluid spill or on a worn stair, walkway, ramp, ladder or landing. Poorly designed and maintained pedestrian thoroughfares, unsuitable lighting, or inappropriately stored materials were also reported to contribute to many of the injuries sustained.

Advance Anti-Slip Surfaces produces a wide range of standard size non-slip stair nosing, ladder rung covers and walkway Safeplate products, as well as custom sizes being available (made to order), to help prevent these preventable accidents from occurring.

Pedestrians should be able to navigate around any stair, walkway, ramp, platform or landing safely. That's why Advance Anti-Slip continues to lead the way in the safe surfaces industry by providing a wider range of products to eliminate the hazards found on so many walking surfaces.
